Cirvee

Full-Stack Development Program

Duration: 7 Months
Mode: Physical & Virtual

Summary

Learn to build complete web applications from start to finish — combining frontend design, backend logic, and database management into one powerful skill set.

Course Overview

The Cirvee Full-Stack Development Program is designed to help you master the full web development journey — from crafting beautiful user interfaces to building robust backend systems that power real-world applications.
Across three structured levels, you'll progress through frontend design, backend development, and full-stack integration using the same modern technologies employed by professional developers worldwide. You'll work with tools like React, Node.js, Express, PostgreSQL, and MongoDB while learning how to manage version control, testing, and deployment.

This program focuses on practice over theory. Each stage includes mini-projects and a major capstone where you'll develop, deploy, and present a fully functional web application. By the end, you won't just know how to code — you'll know how to think like a full-stack engineer and build solutions that users and employers love.

Modules Overview

Level 1 – Frontend Development (Weeks 1–12)

01. Learn the structure, styling, and interactivity of the web

02. Build websites using HTML, CSS, JavaScript, and React.

03. Create real projects like portfolios, blogs, and landing pages.

Level 2 – Backend Development (Weeks 13–28)

04. Learn to design and build APIs with Node.js and Express.

05. Manage databases with PostgreSQL and MongoDB.

06. Implement authentication, testing, and deployment pipelines.

Level 3 – Full-Stack Integration (Weeks 29–30)

04. Connect frontend and backend seamlessly using React + Node.

05. Work with cloud deployment tools like Render and Netlify.

06. Launch your live full-stack app and prepare your developer portfolio.

Career Opportunities

After this program, you can work as a:

Full-Stack Developer	Frontend Developer
Backend Developer	Software Engineer
API Engineer	Web Application Developer

Stay Cirvee Tip

"You can learn frontend. You can learn backend. But mastering how they connect makes you unstoppable — that's the Cirvee edge."
